DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2. 6.497.674 to Steele et al. Steele discloses an apheresis apparatus with a rotatable centrifuge element with a channel for blood therein. The device further comprises an extracorporeal tubing circuit which brings blood from the donor to the centrifuge and a second tubing line that sends the separated component(s) out of the centrifuge for collection or therapy (see column 2). The device further comprises plasma collection bag 94 and platelet collection bags 84, pump-engaging blood inlet loop 132, and various processors that control operation of the entire system, including a graphical user interface for operator input, memory, calculators, and sensors (see columns 16-18, 51, 56, 59 FIG 2A). The controller is capable of adjusting the speed of the centrifuge (see column 37). With regard to applicant's claim limitations drawn to the operations of the controller, such limitations amount to a recitation of the intended use of the device. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. See MPEP 2114.

Application/Control Number: 09/994,696

Art Unit: 3762

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a. US 5,833,866

Brown

- i. Blood collection system with in-process yield determination
- b. US 6,334,842

Hlavinka et al

- ii. Centrifugal separation of blood components with variable rotor speed
- c. US 6,678,040

Suzuki

iii. Blood separation apparatus with online yield determination

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie R. Deak whose telephone number is 703-305-0200. The examiner can normally be reached on M-F 7:30-5:00, every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on 703-308-5181. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
